Providing Services

We provide consulting services mostly in developing countries through Official Development Assistance (ODA) projects mainly in the field of aviation. We have also participated in aviation projects implemented in Japan by the Government and private sector.

- Aviation

- Airport Planning and Design
- Formulation of Master Plan
- Simulation Modeling and Analysis
- Capacity Development
- Other Researches on Airports and Aviation

- Security

- Economic and Financial Analysis
- Peace Building and Civilian Assistance
- Governance
- Environmental and Social Considerations
- Evaluation Analysis
- Translation and Interpretation

Project Achievement/Technical Expertise

The Projects in Malawi

We have implemented "The Project for Expansion of the Terminal Building at Kamuzu International Airport" in the capital city of Malawi. In this project, not only renovation of the existing terminal building and construction of new buildings, but also installation of radar equipment has been carried out.

At the same time, we have also implemented "The Project for Capacity Development for Air Navigation Services" to train the controllers. We have contributed to improving airport service as well as strengthening the safety of sky in Malawi through providing the hard infrastructure and soft support.

The Projects in Afghanistan

We have carried out a number of projects in Afghanistan. In 2012, we conducted a survey for master plan and planned the future of Kabul Airport. From the future plan, "Rehabilitation and Expansion of Aircraft Parking Aprons" and "Rehabilitation of Airfield Pavements" were carried out. Currently, we are implementing a construction project for a security center and a control tower. In addition, we have also constructed terminal buildings and firefighting facilities and rehabilitated runways in Bamyán. We have made significant contributions to the airport sector in Afghanistan.
