Providing Services

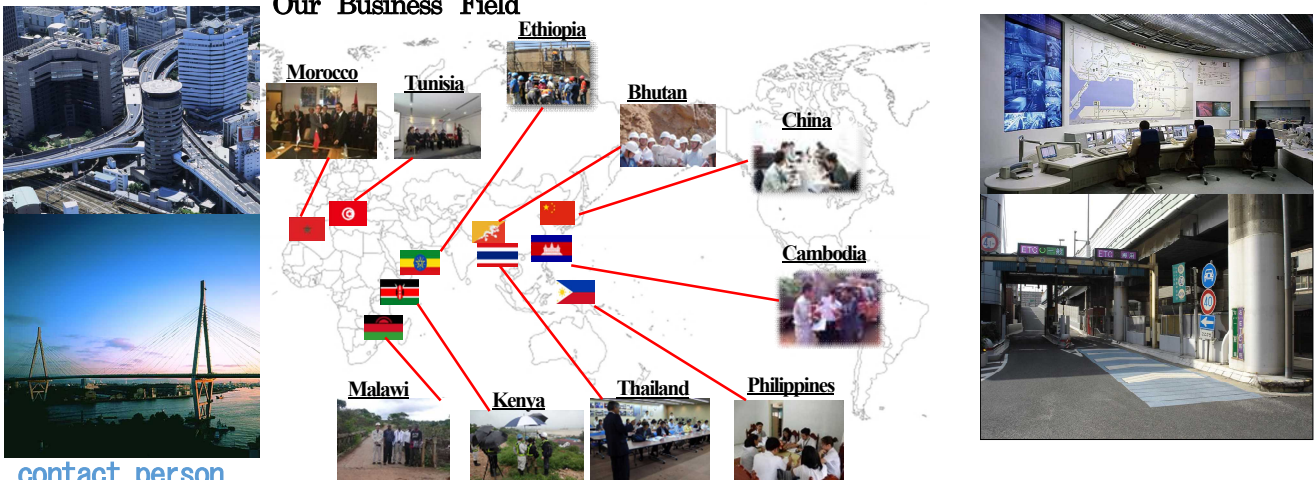

As a leading urban toll road company in Japan, Hanshin Expressway and its group companies are providing wide range of expressway operation and management services including planning, design and construction supervision, maintenance, traffic management and toll collection. They are all based on our 58-year experience and the accumulation of technologies and know-hows along the way. In particular, facing with the rapid aging of bridge structures, Hanshin Expressway has established a sophisticated and efficient maintenance system. It helps to keep all assets in healthy condition in a sustainable manner.

Project Achievement/Technical Expertise

Hanshin Expressway has about 260km network with many long-spanned bridges and viaducts situated in a dense urban setting. Also since 1970s, traffic control system has been operated for congestion alleviation and information provision. ETC (electric toll collection) was introduced in 2001 and now about 95% of drivers pay their toll through this system. This rich expertise is now utilized in many international technical assistance projects especially in Africa and Asia.
