Providing Services

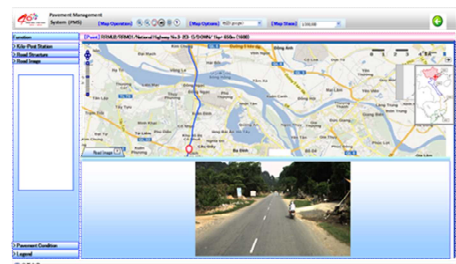

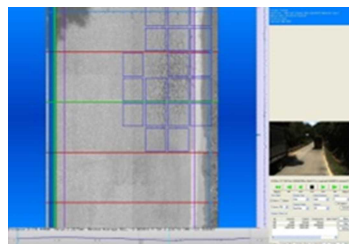

PASCO operates its business by combining 3 elements: capturing any events on the Earth utilizing both “Remote Sensing” and “Onsite Sensing” together with Analysis Technology which leverages AI, IoT, GIS, image processing and other features. By predicting the present and future from the past, and utilizing the technology to reproduce the real world on the computer as well as analysis and evaluation technologies, we provide geospatial information services to solve social issues such as national land and environmental management and conservation, infrastructural maintenance and management, disaster and other risk management and measures.

Project Achievement/Technical Expertise

- Provision of Mobile Mapping System/Automatic Inspection Vehicle for Pavement Condition Survey

- Collecting and investigating road condition basis data in Vietnam
We implemented “Project on Road Asset Management in Vietnam”. Pavement Condition Survey with Automatic Inspection

Vehicle developed by PASCO was carried out through the Project. We could keep the accuracy of the inspection and safety of the surveyors and reduce the time for the inspection.. We have experienced the road asset management projects in Indonesia, Myanmar, Ethiopia, and Democratic Republic of Congo. Our business to road asset management has been expanding in the world over the last few years.
